- Automatic Shut-Off Valve
- Installation Kit
- All Cartridges And Membrane
- 1 Year Limited Warranty

Reverse Osmosis (R/O) is a treatment process that was developed by the aerospace industry to recycle water in closed environments such as the lunar lander. This natural method of purification has been captured in your **Purifiner** residential R/O system bringing low cost, high purity drinking water right to your kitchen.

You can be proud to serve your family, guests and pets high quality beverages, ice and food prepared with your very own sparkling clear drinking water.

Systems are available to suit any size application from your home right up to industrial size models large enough to serve a small community. Please feel free to inquire about the models and options available through your **Purifiner** water treatment specialist.

Note: On units used for drinking water purposes, feed water must be microbiologically safe and potable in all respects at all times. This device is intended for water quality improvement only.
